Global warming is a long-term rise in the average temperature of the Earth's climate system, an aspect of climate change shown by temperature measurements and by multiple effects of the warming. The term commonly refers to the mainly human-caused observed warming since pre-industrial times and its projected continuation, though there were also much earlier periods of global warming.

February 2009. All countries in the world face challenges in dealing with environmental problems stemming from climate change. China's challenges in adapting to climate change are particularly acute as it is a country struggling to prevent even more pollution and natural disasters that stem, in part, from 30 years of unchecked economic growth.
