

### **light sound and waves pdf**

Light is electromagnetic radiation within a certain portion of the electromagnetic spectrum. The word usually refers to visible light, which is the visible spectrum that is visible to the human eye and is responsible for the sense of sight. Visible light is usually defined as having wavelengths in the range of 400–700 nanometres (nm), or  $4.00 \times 10^{-7}$  to  $7.00 \times 10^{-7}$  m, between the ...

Here you can see sound waves and observe the interference patterns made by two or more transducers as the spacing between them is varied. The sound waves drive a color LED, and the color is the phase of the wave, and the brightness is the amplitude.

### **See Sound Waves Using Colored Light (RGB LED)**

In physics, sound is a vibration that typically propagates as an audible wave of pressure, through a transmission medium such as a gas, liquid or solid.. In human physiology and psychology, sound is the reception of such waves and their perception by the brain. Humans can only hear sound waves as distinct pitches when the frequency lies between about 20 Hz and 20 kHz.
