but his point is still correct, the linear algebra is wasted due to the way of explanation and still is. The way they teach school or university up till today and all the online courses was exactly about knowing, sizes, vectors, positive definite and determinant zero.

An Intuitive Guide to Linear Algebra â€” BetterExplained

In mathematics, an algebra over a field (often simply called an algebra) is a vector space equipped with a bilinear product. Thus, an algebra is an algebraic structure, which consists of a set, together with operations of multiplication, addition, and scalar multiplication by elements of the underlying field, and satisfies the axioms implied by "vector space" and "bilinear".

In mathematics, division by zero is division where the divisor (denominator) is zero. Such a division can be formally expressed as $a/0$ where a is the dividend (numerator). In ordinary arithmetic, the expression has no meaning, as there is no number which, multiplied by 0, gives a (assuming $a \neq 0$), and so division by zero is undefined. Since any number multiplied by zero is zero, the expression $0 \dots$
