Gilbert Strang's Linear Algebra and Its Applications gives both an intuitive feel to linear algebra and the geometry that accompanies most linear algebra ideas in two or three dimensions, which can then be generalized to n dimensions.

In mathematics, division by zero is division where the divisor (denominator) is zero. Such a division can be formally expressed as $a / 0$ where a is the dividend (numerator). In ordinary arithmetic, the expression has no meaning, as there is no number which, when multiplied by 0, gives a (assuming $a \neq 0$), and so division by zero is undefined. Since any number multiplied by zero is zero, the ...

In computational mathematics, computer algebra, also called symbolic computation or algebraic computation, is a scientific area that refers to the study and development of algorithms and software for manipulating mathematical expressions and other mathematical objects. Although computer algebra could be considered a subfield of scientific computing, they are generally considered as distinct ...
