

lines of light the pdf

This idea that light travels through space along straight lines, although not strictly correct, is the basis of the very useful ray model of light, which explains a great deal about how we see things.

Line weight is the thickness of the line. Construction lines and guide lines are very light, easily erased lines used to block in the main layout. Visible lines are the edges or "outlines" of an object. They are drawn as solid lines with a thick/heavy weight. All other lines contrast with the visible lines by having either a thinner weight

Implied lines can lead your eye into and through the composition and provide information about character and action. Possible characteristics

wavelength of these two yellow lines are: $\lambda_1 = 588.995 \text{ nm}$ $\lambda_2 = 589.592 \text{ nm}$ B. The diffraction grating. A common way to determine the wavelength (λ) of light radiated by excited atoms in an emission spectrum is by observing the deflection of the light when passing through a diffraction grating.

Spectrometry: The Sodium D lines and the Hydrogen Spectrum

These lines, designated the D2 and D1 Fraunhofer lines, have wavelengths of 589.6 nm and 589.0nm respectively. Using sensitive interferometry, the average wavelength of the sodium lines was determined as well as the difference between the two emission lines. When a sodium lamp is used in conjunction with an interferometer, the wavelengths of the two emission line will create interference patterns.

emitted light occurs at specific wavelengths. For example, hydrogen atoms emit light at five distinct wavelengths in the visible region (400 nm – 700 nm). The line spectrum for hydrogen is shown below: Visible line spectrum of hydrogen (wavelengths are in nanometers) 397 410 434 486 656

If I zoom in on the PDF, the lines shift with each zoom increment. For example, in one increment the top and bottom bounding box lines for image 2 may be "ghosting". Zoom in one more increment and the top and right bounding box lines will "ghost". And so on. Which lines are visible changes with each increment of zoom.
